WATER TREATMENT PRODUCT

POWER Enzyme Powder

FEATURES

- Ensures rapid biological start-up
- Removes nutrients that encourage duckweed and algae growth
- Reduces sludge build up and improves settling
- Controls grease, foaming and scum formation
- Reduces malodors
- Produces an excellent effluent
- Defers dredging cost
- Improves cold weather operation
- Biodegradable

PROPERTIES

Appearance: Free-flowing, brown, granular powder

Boiling point: Not Determined

Non volatiles: 100 %

Solubility in water: Suspends in water

Flash point: None

Storage stability: DO NOT FREEZE!

Store in cool dry area.

pH of liquid: Not Applicable

Flammability: Non-flammable

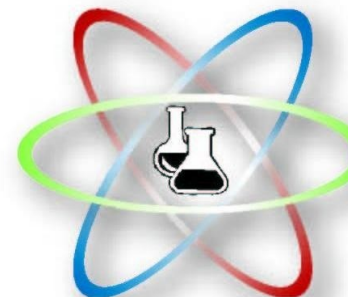

Packaging: 1/2 or 1 Lbs Water Dissolvable Pouch in 25 Lbs Pail

POWER ENZYME POWDER is a biological product specifically formulated to be effective in enhancing water biology in lagoons, lakes and ponds. The micronutrient blend in POWER ENZYME POWDER is specially selected for sludge reaction. It provides a complete formulation for maximum biological activity and reacts with pond and lagoon sludge to produce biological enhancers.

POWER ENZYME POWDER also contains 14 different bacteria strains, selected for their aerobic and anaerobic metabolic activities to lower pH and to break down organic material comprised of proteins, fats and carbohydrates. As a result, algae growth is hindered and water clarity increases. Break down of these organic deposits also results in the elimination of malodors. The biomass established by these microorganisms provides greater resistance to the effects of organic inhibitors and performs more effectively than any natural occurring biomass.

When used as directed, this biodegradable product is safe to use and harmless to people, clothing and the environment. Refer to the label and SDS for additional instructions and precautions. The information contained in this safety sheet is aimed at creating a guide for the selection and use of the product. However, we are not responsible for any use not recommended by ChemTron.
